

Maintenance Programs

JHF's service programs help customers focus on their business, not their maintenance

A smart strategy for reducing costly downtime is performing regularly scheduled maintenance on air compressors and related equipment. John Henry Foster has three predictive maintenance programs that can increase production reliability, reduce downtime, and serve clients in an emergency. JHF advisors will contact customers in advance to perform regularly scheduled maintenance and will also manage the administration and necessary follow-up.

JHF's trained technicians will streamline your maintenance program, enabling you to stay focused on your business and not on wondering whether your system is up and running smoothly.

JHF offers contracted maintenance agreements on most brands and types of compressors and vacuum pumps.

1. Maintenance Agreement Program

We plan and schedule all calls, keep track of and manage oil samples and complete all required paperwork. You will also receive a priority status for emergency service and same-day service, if needed. JHF will work with you to control and budget your maintenance expenses on a monthly, quarterly or semi-annual basis. This agreement also includes a complete inspection of each piece of equipment within the program.

2. Non-Contract Maintenance Program

Another efficient approach to service is our non-contract program, which allows customers to pay only for time and materials for their ongoing service. This program has all the same advantages and features as the above agreement but without the planned billing cycle. This agreement also includes the complete inspection of each piece of equipment within the program.

3. Inspection Program

Our inspection program offers in-depth assessments to verify your equipment is operating properly and efficiently, as well as providing general system recommendations. If desired, a JHF technician can work with a customer's technicians for training, support and conducting a walk-thru session. We provide a written report on each piece of equipment inspected, offer follow-up recommendations and assist with all control settings, adjustments and efficiency set points. A complimentary bearing check will also be offered. This inspection program can serve as an enhancement to your current in-house maintenance program.

**Regular MAINTENANCE on your
compressor adds years to its life!**

PROPER MAINTENANCE will result in less downtime, higher production and **INCREASED PROFITABILITY.**

IMPORTANCE AND BENEFITS OF SERVICE AND MAINTENANCE AGREEMENTS

- Reduce costly downtime and emergency service calls
- Increase reliability
- Manage predictive maintenance program
- Receive priority service when necessary
- On call 24-hr emergency service
- Door-to-door mobile service center that stocks up to \$60,000 in repair and maintenance parts
- Guarantee same day service from factory-trained technician
- Oil sample monitoring and analysis

John Henry Foster is your trusted single source for all your parts and service needs. Our goal continues to be our dedication to provide customers with the most quality, up-to-date products available on the market today. If you choose to use JHF for parts or service, you can count on our commitment to uphold the same standards as we have for the past 70 years.
